SMOKE FREE ZONE

Tobacco smoke contains a deadly mix of more than 4000 chemicals. A huge number of them are toxic and can harm your body. About 70 are carcinogenic. As an institution that prides itself in promoting health and well-being, conducting world-leading medical and cancer research, and providing the safest possible environment for its students and staff, we are proud to announce that from 31 May 2014 (World No Tobacco Day) all UNSW campuses will be completely smoke-free. Breathe easy.
