

- Go to Start menu 
- Select Control Panel
- Under 'Adjust your computer settings' Click in the Java Icon  Java
- This brings up the "Java control panel."
- In the Java control window, go to the "security" tab

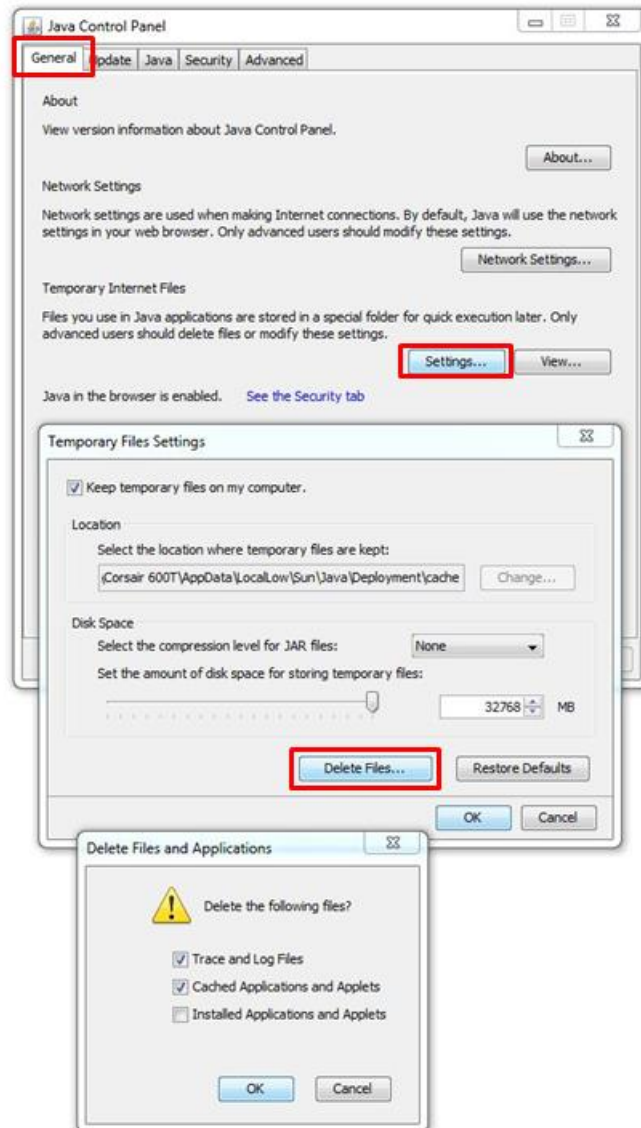

- Select "edit site list" button
- Add the UAT and PROD web-links to the exception site list.
- This should allow the java applet to run accordingly

You may also need to clear the Java Cache memory as follows:

Clearing Java Cache memory:

- 1) To access the Java control panel:
 - a. Window start button ->Control panel->Programs->Java
 - b. In control panel Go to “General” tab and then click on “Setting” button which will prompt the “Temporary File Settings” window.

- 2) Click on the “Delete files” button which will prompt the “Delete Files and Applications” window then click “ok” button.
- 3) Close the java control panel
- 4) Re-open SciQuest ERM
