**UPGRADE NOTES FOR DEPLOYED ENVIRONMENT ..... 5**

# Introduction

This document lists enhancements and modifications for Enterprise Reagent Manager (ERM) 9.4.1. This release consists of defect fixes and two minor enhancements. The baseline for comparison is ERM 9.4.0

## Enhancements

There are two minor enhancements in this release.

Topic	Description
Source Search Results	<p>The source search results for lab and storeroom channels will now display the container's owner and its location down to the sub-location level. Previously the owner was not displayed, and the location was only displayed down to the room level.</p> <p>The source search results for the stockroom channel will now display the location down to the sub-location level, if applicable. Previously the location was only displayed down to the room level. The location displayed is the primary location associated with the stockroom inventory item.</p> <p>Following is an example of source search results where the container's owner is "Bohn..." and the location is in sub-location "Bench 2".</p> <div data-bbox="363 1062 1446 1268" style="background-color: #f0f0f0; padding: 10px;"><p><b>WATER, FOR EMBRYO TRANSFER,*EMBRYO TESTE</b> Brand Name PHLBRAND056356 Bar Code PHLC0056356 CAS # 7732-18-5 SQ Chem # SQ50236 Catalog # PSC#0056356</p><p style="text-align: center;">Philadelphia&gt;Main&gt;3rd&gt;Auto Checkin Lab7&gt;Bench 2 (Bohn, Ed H.)</p></div>
Structure Edit and Rendering	ERM now supports Perkin Elmer's ChemDraw JS version 18.0.0.20. (ChemDraw JS is licensed separately from Perkin Elmer.)

# Fixed Issues

Topic	Description	Defect #
Data Loader	When loading rooms via the data loader, the self-service flag was always set to "Y" for labs and "N" for storerooms regardless of what was specified in the data loader file.	ERM-17129
Display of Transport Hazards	When a given material only had one transportation hazard, that hazard was displayed in the transport hazard's primary, secondary, and tertiary fields, when it should have only been displayed in the primary field. This issue affects both the container view and material view pages.	ERM-17127 ERM-17130
Held Carts	When a user specified a delivery location at the shopping cart item level (as opposed to just the header level), the incorrect delivery location was displayed when viewing the held cart item. (The correct delivery location was displayed when viewing a request item.)	ERM-17125
Shopping Cart	In a specific condition, materials created automatically via the request process are assigned an incorrect MDL number. Specifically, if a shopping cart has multiple hosted catalog items that each create new materials, and the first item has an MDL # while the next item does not have an MDL #; then in this situation, both materials would be assigned the MDL # from the first item.	ERM-17142
Structure Search	Structure searching against internal channels (labs, storerooms, and stockrooms) was extremely slow.	ERM-17124
Structure Search and Catalog Items	When searching an external inventory channel via structure search, the external item could not be added to the user's shopping cart.	ERM-17131
To Do List	When a user completed an item on the To Do List and specified that they were keeping the container, the location was updated, but the Owner was not.	ERM-17126

# Upgrade Notes for Deployed Environment

For deployed environments, please contact JAGGAER ERM Support for information on upgrading to 9.4.1
